

M86 Secure Messaging Service

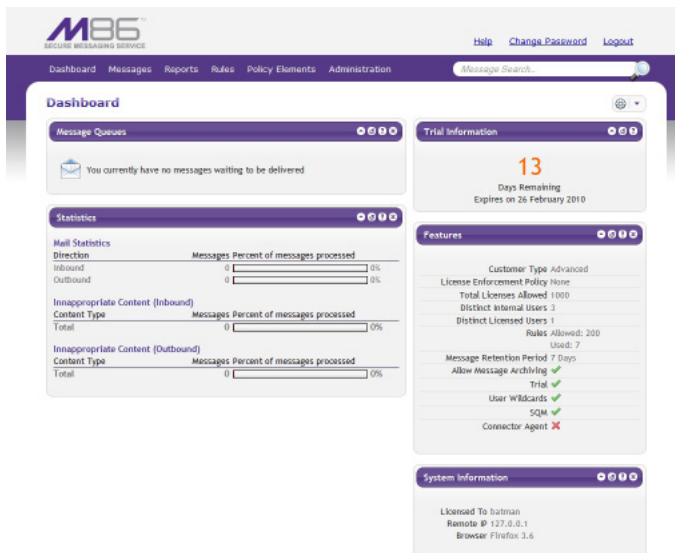

M86 Secure Messaging Service is a new, pure cloud-based email security and management service from M86 Security. M86 Secure Messaging Service is based on the M86 MailMarshal technology, industry-leading email security software with more than 7 million users worldwide. M86 Secure Messaging Service integrates the behavioural malware analysis technology from the M86 Blended Threats cloud service, providing in-depth protection from the latest unknown email attacks.

OVERVIEW

M86 Secure Messaging Service incorporates Text Censor, the industry's leading content filtering technology, and the basis for Content Filtering as a Service (CFaaS) practices for M86 and our partners. M86 CFaaS, along with collective intelligence updates from M86 Labs, helps organizations enforce subscriber rules and policies to constantly improve and adjust email security.

M86 Secure Messaging Service offers the highest performing anti-spam technology in the industry in a pure cloud system. Virus BTN, the independent third-party testing service for anti-spam and anti-virus technology, ranked M86's Spam Censor technology (at the core of Secure Messaging Service) number one in catch rates and false positives in January 2010.

It also enables users to apply detailed control over policies by customizing email security and content filtering settings.

Web 2.0 Customer Console Delivers Widgets, Drag and Drop and Summary Reports

KEY FEATURES

- **Low cost, highly accurate cloud-based cleansing** of spam and phishing attacks protect corporate data, assets and systems
- **Collective intelligence service** delivers continuous improvement in email security policy, protecting corporate networks from the latest email-based social engineering attacks
- **Cloud-based Blended Threats behavioral analysis service** protects against new zero-day and unknown email attacks
- **Text Censor-based Content Filtering as a Service** analyzes email text content, creates scoring schema, manages profanity, confidentiality, and criminality concerns, and improves compliance
- **New tools and interfaces** for customer management and billing/provisioning simplify usage, accelerate deployment, and deliver an efficient, accurate subscription billing service

NETWORK CONFIGURATIONS AND MARKETING SERVICES

M86 Secure Messaging Service delivers new configurations and marketing services for partners and ISPs who want to provide end customers with the latest email protection. Partners can activate trials within 24 hours, and they have the option to co-brand or re-brand the service as well as the trial marketing email automation.

ISPs can consume the service in wholesale, traffic grooming mode if they prefer to avoid capital expenditures or operating expenses, while adding a powerful email security service to their menu of subscriber services. The new billing and provisioning application, as well as extensions to related APIs, provide ISPs with complete facilities for integrating M86 Secure Messaging Service into existing operational support systems.

Finally, ISPs wishing to implement the technology platform in their own facilities receive a complete cloud node system reference architecture that addresses high availability, database replication, scale out and load balancing.

INFRASTRUCTURE AS A SERVICE

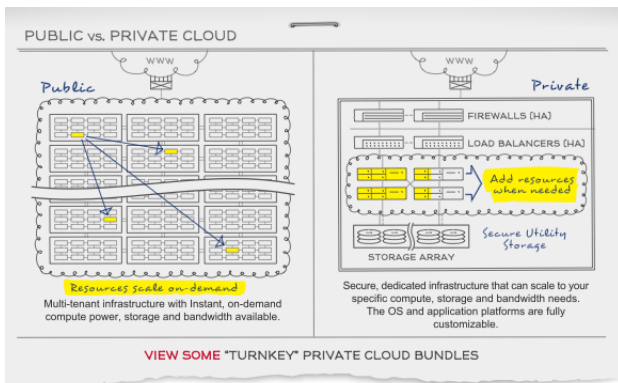

M86 Secure Messaging Service is built on the Rackspace managed private cloud Infrastructure as a Service (IaaS). The Rackspace managed private cloud delivers the predictable and dedicated hardware performance required of a demanding email security service. Simultaneously, it provides the virtualization and resource elasticity associated with public clouds. The Secure Messaging Service cloud node blends next generation virtualization technology with Microsoft Windows platform technology.

System Requirements, Protocols and Standards

- Cross browser support: IE 5 or higher, Chrome, and Firefox 3.0 or higher
- AD/LDAP
- SMTP

ABOUT M86 SECURITY

M86 Security is the global expert in real-time threat protection and the industry's leading Secure Web Gateway provider. The company's appliance, software, and Software as a Service (SaaS) solutions for Web and email security protect more than 24,000 customers and over 17 million users worldwide. M86 products use patented real-time code analysis and behavior-based malware detection technologies as well as threat intelligence from M86 Security Labs to protect networks against new and advanced threats, secure confidential information, and ensure regulatory compliance. The company is based in Orange, California with international headquarters in London and development centers in California, Israel, and New Zealand.

Public Cloud vs. Managed Private Cloud

REPORTING

M86 Secure Messaging Service provides standard reports and drill down reporting services. Standard reports offered include billing, bandwidth savings, message blocking, growth trends, service levels and more. Drill down reporting filters are available for message direction, time period, format, and returned record size.

CONTENT FILTERING AS A SERVICE

This service enables organizations to:

- Block inbound/outbound profanity, racist, sexist or other offensive content
- Block explicit images and specific attachment types
- Impose size restrictions
- Block outgoing messages with sensitive or confidential content
