

M86 SECURITY REPORTER

The Most Flexible, Robust Reporting Solution Available

The centrally-managed M86 Security Reporter (SR) integrates with the M86 WFR and/or the M86 SWG to manage and store large volumes of data quickly without impacting performance. Whether deployed as a traditional appliance, virtual appliance or both, the M86 SR enables organizations to prove compliance, manage productivity and demonstrate the value of their IT security investment easily.

HIGHLIGHTS

Robust, Customizable Reporting
Choose from out-of-the-box templates or customizable reports that can analyze thousands of data combinations precisely. Reports can be scheduled for automatic delivery to various recipients within an organization.

Flexible Deployment Options
Available as an on-premises appliance, virtual appliance or a combination of both, the M86 SR gives organizations the flexibility to deploy reporting conveniently and cost effectively.

Ease of Use
The M86 SR requires no additional hardware, software or support resources, so installation and management is a snap. Plus, its intuitive design allows a variety of users to run reports easily and quickly.

Extensive Storage Capacity
With a storage capacity of up to 12 TB, the M86 SR can store data for years, rather than the typical 30-day limits imposed by competitive reporting solutions. This enables organizations to provide long-term proof of compliance.

BENEFITS

Options to Fit Virtual and/or Traditional Environments
Available as an on-premises appliance, virtual appliance or a combination of both, it gives organizations the flexibility to deploy reporting conveniently and cost effectively.

Ease of Use
The M86 SR requires no additional hardware, software or support resources, so installation and management is a snap. Plus, its intuitive design allows a variety of users to run reports easily and quickly.

Extensive Storage Capacity
With a storage capacity of up to 12 TB, the M86 SR can store data for years, enabling organizations to meet regulatory compliance and legal discovery obligations.

Translates Web Traffic into Actionable Business Information
Pre-set report templates make it easy to analyze thousands of data point combinations and put them into a reporting format that clearly communicates the business impact. All of this is done quickly without any noticeable delay in performance.

Causes No Network Performance Degradation
Processes millions of lines of data without negatively impacting other network systems.

DEPLOYMENT OPTIONS

Traditional appliance
Deployed as an all-in-one, standalone appliance, the M86 SR requires no additional hardware, software or support resources. This minimizes costs and resources.

Virtual Appliance
The M86 SR virtual appliance provides the same level of robust reporting as the traditional appliance, but it deploys as a virtual appliance via VMWare ESXi4—on an organization's hardware of choice. This gives organizations the flexibility to deploy reporting that fits hardware platform requirements, capacity limitations and supported hardware costs.

Combination of traditional and virtual appliance
For organizations that need more than one M86 SR unit, the M86 SR is available in any combination of traditional and virtual appliance options. For example, an enterprise could install a traditional appliance at corporate headquarters and use a virtual appliance at a satellite office that has less space or fewer IT resources.

FEATURES

Hardware Compatibility

Virtual appliance works with various hardware that runs VMWare ESXi 4X or higher.

Intuitive Executive Reports

Identify anomalous Web activities quickly through easy-to-read graphical reports.

Custom or “Canned” Reports

Generate “canned” reports using pre-set templates for quick reference, then drill down for more detail and customization.

Detailed Forensic Reporting

Uses detailed drill-down reporting to provide unique criteria that help organizations build compelling forensic reports. User intent is gauged by documenting the URLs visited and the search string used within a search engine text box.

Report Memorization, Scheduling and Distribution

Saves or memorizes specific data inquiries for immediate or future access. Custom reports can be scheduled, executed and automatically distributed via email at a preferred frequency (e.g. daily, weekly, monthly).

Archiving

For large installations or networks that generate significant Web traffic, M86 Security offers attached storage (up to 12 TB) that collects historical data for future inquiries.

Real-time Threat Dashboard

Offers graphical gauge view of online activity, displaying an organizational snapshot of multiple threat categories and top offenders based on predefined thresholds and policies.

Alert Notification

Delivers automatic, predefined notifications via email, SNMP, or as an alarm in the system tray for excessive URL activity or bandwidth usage.

Real-time Remediation

Locks out policy violators or users who engage in potentially threatening activity. The lockout mechanism—activated manually or automatically—can be set to varying levels of restriction, from category lockout to complete quarantine.

Bandwidth Management and Reporting

Provides real-time management and monitoring of inbound and outbound bandwidth activity by protocol, port and user.

Trend Charting

Displays historical trending of Web activity and bandwidth usage based upon predefined categories or protocols.

ABOUT M86 SECURITY

M86 Security is the global expert in real-time threat protection and the industry's leading Secure Web Gateway provider. The company's hardware, virtual appliance, software, and Software as a Service (SaaS) solutions for Web and email security protect more than 25,000 customers and 26 million users worldwide. M86 products use patented real-time code analysis and behavior-based malware detection technologies as well as threat intelligence from M86 Security Labs to protect networks against new and advanced threats, secure confidential information, and ensure regulatory compliance. The company is based in Irvine, California with international headquarters in London and development centers in California, Israel, and New Zealand.
