

VuSafe

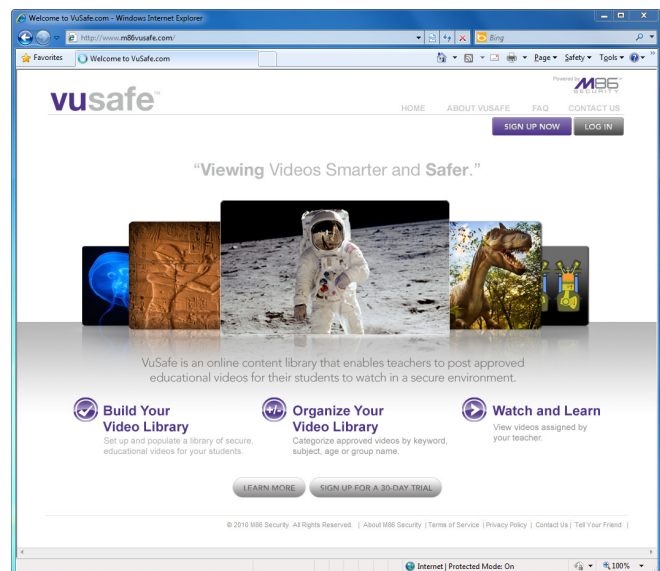

Secure Video Library for Education Environments

Video sites such as YouTube provide access to educational content that enriches learning for students who have grown up in a Web 2.0 world. These sites also give teachers an effective way to supplement educational materials affordably in tightly-budgeted environments. However, finding and sharing video content can be challenging due to safety and compliance concerns. As a result, many school districts block video sites indiscriminately, but this has proven ineffective, if not counterproductive, for educators. As a matter of fact, YouTube has become a highly-requested tool for classroom use.

Teachers need a way to expose their students to useful videos without exposing them to the harmful content that often accompanies videos on sites like YouTube. To address the dual need for safety and access in schools, M86 Security developed VuSafe, an easy-to-use secure video library that enables teachers to find videos on YouTube and other video sites, add them to their own video libraries and share them with students—without inappropriate ads, viewer comments or outside links.

VuSafe Benefits

- Helps enforce Internet Acceptable Use Policies by protecting students from inappropriate content
- Allows users to add videos from a variety of video sites (not limited to YouTube)
- Maintains compliance with education-based regulations such as CIPA, COPPA and FERPA
- Enables teachers to supplement learning tools free of charge, so they can stay within budget
- Ensures students remain on task by eliminating distracting peripheral content
- Easy to manage and administer; no hardware or software to install
- Allows use of iPads and other Flash-restricted devices by supporting HTML 5
- Brings teachers together through the **VuSafe Community**, allowing them to share videos and ideas
- Includes built-in policies for video submission, approval and viewing

It Takes a Community

It helps to find out what other teachers use for their students. The **VuSafe Community** is a place where teachers can browse videos posted from other schools and add them to their own VuSafe libraries.

Access to a Variety of Video Sites

Though YouTube is a popular video site, there are many places to find quality educational videos online. VuSafe allows teachers to use videos on a range of sites, rather than limiting them to YouTube alone.

How Does VuSafe Work? It's as Easy as 1-2-3

Teachers

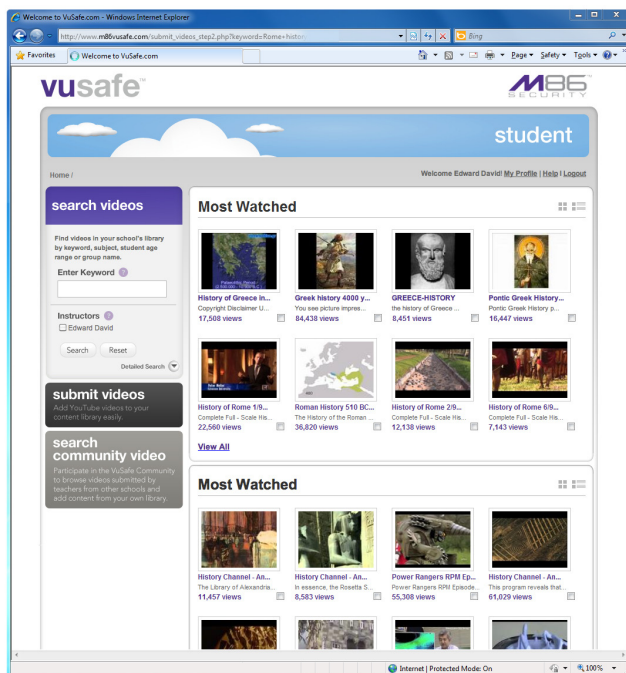

1. Search for educational videos on YouTube or other video sites
2. Add videos to their own VuSafe library and assign categories, including student age, teacher name and subject—even tag them by keyword
3. Share videos with students safely

Students

1. Log in to VuSafe with a teacher-provided password
2. Search for videos by approved category and *only* within their age range
3. View only approved videos without risky outside content

Designated School Administrators

1. Receive automatic notifications of newly-posted videos
2. Get online reports with statistics for their school, such as most-watched videos, most popular videos, most active teachers, etc.
3. Ensure students, teachers and school districts are safeguarded from inappropriate content and compliance breaches

Acing Security: VuSafe and M86 Solutions for Education

VuSafe is available for use by all education institutions. However, it works optimally with the M86 Web Filter and Reporter (M86 WFR) or M86 Secure Web Gateway (M86 SWG) because these solutions enable school districts to block source sites like YouTube, while allowing full access to VuSafe. When used alone, VuSafe provides a secure environment for video sharing as long as source sites remain accessible.

Additionally, the **M86 WFR** enables district IT managers to control students' online searches as well as access to applications such as instant messaging, peer-to-peer networks, anonymous proxies, remote desktop applications and games.

The **M86 SWG** provides real-time protection from malware, preventing sophisticated data-stealing malware from infecting school networks, and ensuring student and staff information remains confidential. IT leaders can secure and control the way administrators, teachers, and students use Web 2.0 resources without the need to completely block them.

Find out how easy it can be to find, organize and share educational videos. Visit www.m86vunsafe.com to get started.
