

MailMarshal® SendSecure™

Secure Email Service

Sending confidential email securely is easier than ever with MailMarshal SendSecure. MailMarshal SendSecure is a hosted service that provides effortless secure email delivery for confidential or sensitive information to any email recipient in the world. Recipients do not require any special software or training to receive secure messages – just an Internet connection and web browser.

OVERVIEW

M86 Security has partnered with ZixCorp, an industry leader in providing easy-to-use email encryption services, to provide MailMarshal SendSecure. MailMarshal SendSecure is an optional service which allows customers to send sensitive emails or confidential documents to any recipient in the world securely, without requiring the recipient to download or install any software.

MailMarshal SendSecure is an optional service add-on for customers using MailMarshal SMTP. MailMarshal SMTP is used to intelligently scan email for confidential information, based on policies you control. When messages conforming to your encryption policies are sent, the message is automatically flagged for secure delivery by MailMarshal SMTP, and is sent over a TLS connection to the MailMarshal SendSecure service.

Once MailMarshal SendSecure has received the message, ZixCorp's Best Method of Delivery™ technology is used to route the message securely to all recipients.

KEY FEATURES

- Ability to send secure messages to any recipient in the world, without special software or pre-requisites
- Encrypted read, compose and reply capabilities for all message recipients enabling secure two-way communication
- Automatic generation of notifications and invitations
- Support for Blackberry® and Windows Mobile® devices
- Compatible with MailMarshal Secure Email Server or similar products
- Custom password policies tailored to your organization's requirements
- No software to install and maintain, hosted service delivery "in the cloud"
- Encryption is automatic and transparent to the sender; no training required

KEY BENEFITS

Secures Email to Anyone, Anywhere

MailMarshal SendSecure allows you to send messages securely to any recipient in the world, without the need to establish a relationship prior to exchanging encrypted messages. Furthermore, MailMarshal Secure requires no additional software to use; new recipients navigate to the MailMarshal SendSecure Portal to read their messages using a standard Web browser.

Secure Compose and Reply Functionality

After a recipient reads a message that has been securely transmitted to them, they can reply using the custom webmail client on the MailMarshal SendSecure Portal. For an added layer of security, you can choose to only allow your message recipients to reply to your own domains, ensuring privacy.

Compatible with Most Existing Email Encryption Products

If you already use MailMarshal Secure Email Server, or a similar product using the S/MIME or OpenPGP encryption standards, MailMarshal SendSecure can seamlessly complement your existing solution. Standard PKI encryption methods can be used for to send messages within a closed community, providing strong encryption and digital signing capabilities. MailMarshal SendSecure can be used to communicate securely with those outside of the traditional PKI community.

Custom Branding of MailMarshal SendSecure Portal

MailMarshal SendSecure's message portal is modified to suit your corporate branding guidelines. Your corporate logo can be added to the site, colors can be changed to meet your company's color scheme, and notifications can be customized to suit your tastes.

Message Delivery Using ZixCorp's Best Method of Delivery™

Using the Best Method of Delivery™ system, MailMarshal SendSecure sends secure email to any recipient in the most secure way possible. If an email is sent from one MailMarshal SendSecure customer to another, it will be sent using the secure TLS tunnels that have already been established. If messages are sent to an unknown recipient, a notification will be generated, and the recipient will be invited to read their secure message via the MailMarshal SendSecure web portal.

In addition, using MailMarshal SendSecure gives you the ability to send secure messages to anyone in the ZixDirectory, a directory comprised of over 14 million email users, including those in the healthcare, banking, insurance, and technology industries.

Support for Mobile Devices

MailMarshal SendSecure can be used to read and send messages from BlackBerry® and Windows Mobile® devices. With MailMarshal SendSecure, you can send confidential messages and be sure that the recipient can read and reply securely, no matter what they are using.

Reliable and Cost Effective

MailMarshal SendSecure is easy to set up and requires no maintenance from your internal IT department. MailMarshal SendSecure is hosted in a datacenter and has a 99.9% availability guaranteed to our customers through our service level agreements (SLAs).

ACME MESSAGE CENTER

Welcome to Acme Message Center
Acme Message Center is an email security portal which allows you to view and compose encrypted email. Please enter your email address and password below to access your encrypted messages.
